

Assignment-3: Test Input Design

Test Input Design for Create New Account and Login Function for Facebook.

Name: MD. SAJU ISLAM

Batch: IB -SQA-08

Course: SQA

Introduction

Test input design is an important part of software testing. It ensures that different types of inputs are tested to validate system functionality. This assignment focuses on designing test inputs for the Create New Account and Login features of Facebook.

Test Input Design for Create New Account

Test Case ID	Input Data	Expected Result	Status
TC01	Valid name, email, password	Account created successfully	
TC02	Empty name field	Error message displayed	
TC03	Invalid email format	Error message displayed	
TC04	Weak password	Password strength warning	

TC05	Duplicate email	Account already exists message
------	-----------------	--------------------------------

Test Input Design for Login Function

Test Case ID	Input Data	Expected Result	Status
TC06	Valid email and password	Login successful	
TC07	Invalid email	Error message displayed	
TC08	Wrong password	Incorrect password message	
TC09	Empty fields	Error message displayed	
TC10	Account not registered	User not found message	

Conclusion

This assignment demonstrates how test input design helps ensure that both valid and invalid inputs are tested. Proper test cases improve system reliability and user experience.
